

JAGRUTI MOKARIYA

Sr. Electronics Engineer

Jagrutim1994@gmail.com | 7874814657 | Vadodara

ABOUT ME

Dedicated and Detail-orientated Electronics and Communication engineer with 2 years of experience in electronics design and testing and troubleshooting. Eager to contribute technical expertise, problem solving skills and commitment to continuous learning to support organizational growth.

KEY SKILLS

<u>Programming:</u>	Embedded C, Python, C#, VBA
<u>PCB Design:</u>	Altium Designer, kiCad
<u>Development Tools:</u>	Thonny Microsoft Visual Studio, Arduino IDE
<u>RF:</u>	Signal Generation Techniques, RF Power Amplifier Design, RF Measurement on RF Test Equipments like Signal Generator, VNA, Spectrum Analyzer, Function Generator

WORK EXPERIENCE

RF Microtech Electronics

February 24 – Present

- Designed schematic and 2 layer PCB Layouts using Altium Designer and kiCad.
- Developed firmware for embedded systems in C and Python language for microcontroller based systems.
- Built Windows based GUI application in C# for product control and monitoring.
- Developed automation tools in VBA for RF lab test equipments.
- Designed and tested 1 Watt RF Power Amplifier.
- Performed RF Characterization using Vector Network Analyzer, Signal Generator, Spectrum Analyzer, Power Meter.
- Designed and tested analog and digital circuits involving OP-AMPS, transistors, DDS, PLL(signal generation techniques).
- Familiar with RF Passive components including attenuators Filters, Couplers Splitter and Combiner.
- Designed and developed a PLL based RF Signal Generator with frequency synthesis, Hardware integration and performance testing.
- Performed reverse engineering of electronic circuits to analyse functionality and support Product development.
- Collaborated with cross functional team to debug hardware and firmware issues and ensure reliable product performance.
- Hands on experience in Technical Documentation like datasheet, user manual.

❖ Projects

- PLL Based 8 Channel RF Signal Generator
- 1 Watt RF Power Amplifier
- Windows Desktop Application for Product Control
- Embedded Firmware for microcontroller based System

xEye Innovations Pvt. Ltd.

2016 – 2017

- Developed Python applications for real-time camera streaming, which included socket programming for data transmission, enabling seamless live video feeds from cameras.
 - Designed and implemented image capturing solutions, optimizing image quality and processing speed, resulting in a more efficient image capture process.
 - Proficiently utilized Linux OS to ensure system stability and security, troubleshooting issues and maintaining server infrastructure.
 - Documented software architecture, user manuals, and technical specifications to facilitate team communication and end-user understanding.
-

EDUCATION

B.E. Electronics and Communication Engineering (2012 – 2016)

Babaria Institute of technology

CGPA: 7.9

Academic Project: Bluetooth based mobile controlled defence robot with live surveillance

INTERNSHIP & CERTIFICATION

- PCB designing workshop held by IETE Students' Forum
- Vocational training on TV Transmitting System at Doordarshan High Power TV Transmitter
